Babelsberg Upgrades with Harrison

Nashville, TN, April 2006 – Harrison has just announced that Studio Babelsberg recently purchased an IKIS upgrade for their preexisting SeriesTwelve console. With the IKIS Control Platform Babelsberg's 160 channel SeriesTwelve also features 2 touch screens, 16 Auxiliaries, 64 main and 64 freely routable peak meters, 32 master meters, and 2 displays. The system also includes 64 x 8 PEC/Directs, 2 motorized joysticks for automated panning, and 2 shared panels for 2 re-recording mixers.

Gary Thielman, Advanced Products Manager for Harrison, commented, "All of these capabilities were designed into the digital engine of the SeriesTwelve that Babelsberg installed four years ago. With Harrison's ongoing philosophy of "future proofing" every user's equipment investment, we were able to unlock all of those features with a simple upgrade of Babelsberg control platform to IKIS."

The six-studio facility offers all of the current sound formats, an extensive selection of audio and video workstations, and optimized interface management. Studio Babelsberg currently houses three Harrison consoles and is considered the most modern digital mixing studio in Europe.

About Harrison by GLW
