For Immediate Release

Korea's K & Company Chooses a Harrison MPC4-D

Nashville, TN, April 2006 – K & Company Post Facility in Seoul, Korea has ordered a Harrison MPC4-D™ for its new post-production studio in Seoul. The sale was made by Cool Media in Seoul, Harrison's exclusive agent for Korea.

The MPC4-D will be the centerpiece of K & Company's new state-of-the-art post-production and film facility. The MPC4-D will feature 10 wideviewing angle TFTs for Harrison's unique channel strip display which provides a complete real-time visual representation of each channel's sound envelope and the audio parameters for that strip together with Harrison's patent applied for PreView with History Waveform for every channel. Harrison's Waveform provides mixers a 20 second envelope – a 10 second preview of audio yet to be played **and** ten seconds of history (audio already played). With Harrison's Waveform a mixer can now scan the waveforms across the entire console to find that one critical sound *from any source either before* it is played *or after* it has been played!

"This is Cool Media's fourth large format Harrison console sold in Korea within the year", commented Young Min Aw, Cool Media's general manager. "The Korean market requires quality and the latest technology. Harrison provides that technology. Mixers like Harrison's ease of use and advanced mixing features such as Profiling and PreView with History Waveforms for each channel. Facility owners like Harrison because of Harrison's reputation for reliability and the future upgrade path built into every Harrison console. This combination makes a Harrison console a very cost effective investment."

Gary Thielman, Harrison's advanced product manager, added, "Harrison's PreView with History Waveform is one of the most significant advances in the art of film dubbing since Harrison introduced full dynamic automation to film mixing in 1986. Harrison Waveform displays are truly unique. Waveforms offer the studio owner greater time savings at the same time offering film mixers a new tool to be more creative."

About Harrison

Based in Nashville, Tennessee, Harrison is a world leader in the design, manufacture and support of advance technology digital film dubbing consoles as well as professional audio mixing consoles for television broadcast, video post-production, and live sound applications. Harrison continues to expand the capabilities of contemporary digital console architecture and design. With primary patents for audio console technology, Harrison is committed to engineering innovation and excellence.
