

KOTV Upgrades with Harrison's IKIS™ Control Platform and Exclusive MirroredComputing™

Nashville, TN, April 2006 – KOTV, Channel 6, Spirit of Oklahoma has upgraded their Harrison TVD-SL™ by adding Harrison's IKIS™ Control Platform with MirroredComputing™. KOTV, a CBS affiliate is a subsidiary of Griffin Communications. The award-winning station continues to be ranked first in the Tulsa market in number of viewers of its newscasts. Using the TVD-SL, KOTV broadcasts more locally produced news than any other TV station in the Tulsa market.

IKIS™ is Harrison's new PC-based control platform. Powerful enough to provide speedy recalls, it also provides the industry's most pleasing graphical user interface. KOTV also opted for Harrison's new redundant computer option, MirrorComputing.

MirrorComputing is accomplished by using an IKIS primary computer with an identically configured secondary (mirror) computer. This computer is fully useable as a graphical control station or as a metering station. In the event of a main computer failure, the Harrison SerialSupervisor™ functions as the main switching unit to allow the user to activate the mirror computer as the new primary. The control switchover is completed in a few seconds allowing the current broadcast to continue uninterrupted. All audio settings and control functions are duplicated on the mirror computer so that the switchover is inaudible. Seamless is the correct description.

About Harrison by GLW

Based in Nashville, Tennessee, Harrison by GLW is a world leader in the design, manufacture and support of advance technology digital film dubbing consoles as well as professional audio mixing consoles for television broadcast, video post-production, and live sound applications. Harrison continues to expand the capabilities of contemporary digital console architecture and design.
